

Advantage Virgosys

White Paper on outsourcing to Virgosys

R S Sharma

www.virgosys.com

The key to successful offshore outsourcing for your project lies in the selection of an experienced & technically qualified offshore software development service provider. Virgosys is a flexible organization and has policies, which are to the highest degree customer-centric. An Offshore development partner must satisfy a number of critical technology, management and business criteria. Virgosys has all the essential ingredients of a successful software out-sourcing partner.

24x7 Support & Maintenance

Virgosys's dedicated service center is equipped with a 24/7 hotline, teleconferencing equipment, a relevant technical knowledge base, and detailed information for every project on support. Our remote monitoring suite allows us to respond instantaneously to any technical problems.

Near to the ground cost

Our company tries to help its clients reduce the overall IT project (solution) costs. Doing that we also take care not only of cutting custom software development expenditures, but also the ones associated with technical support and maintenance.

Skills

All of our team members have several years of expertise developing customized, fully integrated systems in a variety of Industrial standards. We've had experience with a variety of solutions using up-to-the-minute technologies available.

Project Management

We leverage our excellent communication with our offshore sites to your advantage. Our project managers at your location interface between you and our offshore management teams.

Management Expertise

Virgosys is led by highly qualified and experienced technocrats who bring with them several years of experience in the field of business consulting, software design and development. The promoters have extensive experience working both in India and abroad.

Significant Experience in Offshore Development

Virgosys has executed several offshore software development projects and also has extensive product development experience having worked with various Product companies.

Development Infrastructure

Virgosys has a well-equipped software development infrastructure for Offshore Software Development. A UPS and a generator back up round-the-clock power supply as well.

Communication

Client interaction is of utmost importance for the success of an Offshore software development project. Information transfer from the Client to Offshore team (and vice-versa) is done using e-mail, chat, FTP and conference calls. In addition, clients are also sent weekly status reports of their projects keeping them abreast of all the latest developments.

Quality Assurance

Virgosys implements the Software Quality Assurance (SQA) process that addresses the quality assurance needs at every phase of the development cycle. Our QA team has developed a focused quality control checklist, which ensures that every solution delivered by us measures up to the highest possible international standards.
